**ABSTRACT**

Stone moroco *Pseudorasbora parva* (Schlegel, 1942), fish of Asian origin, since 1990 are being recorded in Poland. In October and November 2001 five specimens were recorded in the Olechówka Stream (Ner/Odra drainage basins) in the city of Łódź. That was the first record of the species for both the city and the region of Łódź. The fish were probably introduced by anglers using them as live bait.
